Summary

Experienced Software Developer with a demonstrated history of working in the web industry. Skilled in Javascript, React, Html, Css and more.

Work Experience

Lead Front End developer, Noesis (Contract), Greece-Remote

September 2024 - Present

- Developed the **whole frontend infrastructure** for a specialized educational platform designed to support students with dyscalculia. Leveraged Next js for frontend development, including tools like Tanstack query, zod, mantine, typescript, lint and husky.

- Also supported backend team for the authentication architecture using JWT and http only cookies. Helped to create the correct user stories and technical requirements depending on the customer needs.

Fullstack Developer (Freelance)

March 2024 - Present

- Developed a **full stack** application for a Hearing aid retail store. Has a fully customized admin panel so the user can update the content at any time. Used Next js pages for the frontend side and Next js api for backend infrastructure. MongoDB for database and AWS s3 for storage. [GlekasHearing](#)

- Created a multi page fully responsive marketing template site for display purposes. [Enospace](#)

Front End Developer, Flarmio, United Kingdom-Remote

March 2022 - August 2024

- At Flarmio i was a key member of the team. Created the **whole frontend infrastructure with** a mono repo for 2 applications that supports hotel management & guest experience. Such as property management, booking engine and more. Used Turbo repo with Next js to share common functionality between the two projects

- My strong background in communication and teaching helped me to train new developers and welcome them to the team smoothly and also managed the team by providing guidance about the prioritization of the tasks needed to be done depending on the business needs.

Front End Developer, Study Hall Ltd, United Kingdom-remote

March 2022 - June 2023

- At Study Hall, i began my journey as a junior software developer. I contributed to implementing the frontend infrastructure of an educational platform, designed to prepare children for school entrance exams. Had to dive into whole different areas of the project such as tech and business refinements. Created tickets to analyze business needs and export them to technical tickets.

- My strong communication skills helped me discuss business needs with the CEO of the company and with the help of the designer to actually implement them in Figma and code. Also to perform a lot of demos for the investors of the product.
